

Instructions for Using Fish Pharm Concentrate.

Water plants to be treated liberally in the AM. That evening, spray plants to be fed. Spraying in the evening lengthens drying time avoids the possibility of leaf burn in high temperatures.

Mix 8 ounces Fish Pharm Concentrate to one gallon of water. Spray liberally over all bedding plants, vegetables and ornamentals. Please repeat twice monthly for best results.

If you are using one of our outdoor Insecticidal Soaps, you may add the Fish Pharm to that mixture and save a full step by applying the two products at once. Simply formulate the soap to the desired strength, then add the 8 ounces of Fish Pharm to that mixture.

However, if you are fighting fungal disease, it is best to apply these products individually so as to have weekly applications of a Pharm Solutions product. For example, one week Rose Pharm, next week Fish Pharm, etc.

Happy gardening,

The Staff at Pharm Solutions Inc.
